

RESPIRATORY PROTECTION

Our experience has shown us the importance of equipment undergoing annual inspection. Even the smallest leaks in the mask caused by abrasions or small foreign matters will lessen the protection factor significantly.

At our service centres, we can service and repair all types of respiratory protection.

A SAFETY SERVICE SOLUTION WITHIN RESPIRATORY PROTECTION INCLUDES:

- Cleaning and disinfection of full-face masks. Membranes and panes are replaced when needed and controlled in our test bench.
- Turbo equipment is cleaned and inspected, and the engine is calibrated in our test bench.
- Filter panels are pressure tested and the filters are replaced.
- Pressurised cylinders are serviced.

If you have any questions regarding Safety Safety for your respiratory protection, please contact our Service- & Production Coordinator, Simon Larsen, on e-mail sla@icmsafety.com.
